

Website Name: Moviebuzz

Topic description: Create a website focused on movies which will allow users to browse a collection of movies and learn more about each one. Every movie will have information such as its title, poster, release year, genre, director, rating, and a short description of the story. Users will also be able to search for movies and filter them by categories such as genre or rating. The movie information will be stored in a database so that it can easily be added, updated, and displayed throughout the website. My goal is to create a simple but professional-looking website that makes it easy and enjoyable for people to discover movies they might want to watch.

Page names:

1. **Home** - Featured/popular movies, and an introduction to the website.
2. **Browse Movies** - Displays all movies from the database with info like posters, titles, genres, ratings, and release years.
3. **Movie Details** - A page for an individual movie with its poster, description, director, cast, genre, rating, release date, and other information.
4. **Genres** - Lets users see individual categories such as Action, Comedy, Horror, Sci-Fi, Drama, and Animation.
5. **About Us** - Explains what the website is, why it was created it, and its purpose.
